REV 10/04

12/26

airfoil portions 130, which is generally structurally more efficient than the cantilevered arrangement shown in Figure 5.

[0032] From the foregoing, it will be appreciated that, although specific embodiments of the invention have been described herein for purposes of illustration, various modifications may be made without deviating from the spirit and scope of the invention. For example, embodiments of the canard arrangement can be implemented on aircraft having configurations different than that shown in Figure 1. Other arrangements of structures having characteristics in common with those disclosed herein are included in the following pending U.S. Applications, both of which are filed concurrently herewith and both of which are incorporated herein by reference: 10/690,283, entitled "Method and Apparatus for Actuating Movable Components, Including Canards, Over Multiple Ranges," (Attorney Docket No. 03004.8078US2); and 10/690,285, entitled "Method and Apparatus for Rotatably Supporting Movable Components, Including Canards," (Attorney Docket No. 03004.8079US1). Accordingly, the invention is not limited except as by the appended claims.
